

*I would like to take this time to thank Dr. Adams and his staff for the kindness and support they have given me. I have had numerous dental work completed in the past 3-4 years and all of it performed by Dr. Adams.*

*Recently I went in for my routine six-month exam and cleaning. Prior to this exam I had noticed that my lower gums were quite red and swelling, which was to the best of my knowledge an infection. The dental technician looked at my gums and confirmed that I really did have an infection and that my routine cleaning could not be performed that day due to this. I was scheduled to come in a couple of days later and at that time a deep cleaning was to be performed, and also the "pockets" in my gums (this is where the infection was coming from) were to be measured for their depth. I was also to be given antibiotics in each of the "pockets" in order to clear the infection, as well as special toothpaste and a prescription that I had to take twice a day. My routine exam, which my dental coverage would have paid 100% for, was costing me a great deal more than I had expected. I was scheduled for a three month follow up to see what progress was being made by the treatment that was given to me, and much of a surprise to all of us, my infection was significantly reduced, the "pockets" had gained back some of the depth that is necessary for healthy gums and the cleaning of my teeth was not as painful as it had been previously.*

*I realize that a lot of patients are doubtful when their dentist informs them that special work must be performed for them to maintain healthy teeth and gums. In our society today we are constantly hearing about people being taken advantage of by health care professionals but I can honestly say that Dr. Adams and his caring staff are NOT in this category. I have recommended Dr. Adams to many of my friends and they have thanked me over and over again.*

*If the eyes are the doors to the world, then Dr. Adams and his staff have given me the smile to walk through it.*

*God Bless You All*

*Paulette*
